PASSIVE FIRE PROTECTION - FIRE STOPPING

A firestop or fire-stopping is a form of passive fire protection that is used to seal around openings and between joints in a fire-resistance-rated wall or floor assembly. Firestops are designed to maintain the fireproofing of a wall or floor assembly allowing it to impede the spread of fire and smoke.

Services Offered

- UL system/EJ
- Bill of Quantity
- Application/Installation
- Field Inspection Reports (HILTI CFS DM SOFTWARE)
- Labelling

Material Categories Offered

- Intumescent sealants
- Mortar
- Spray seal Type
- Mineral wool board system
- Collar and Wrap strip

Areas of Expertise

- Commercial Buildings
- Industrial

PASSIVE FIRE PROTECTION

Rise and Shine Contracting LLP's Firestopping Division, which was started a decade ago to fill the void of professional applicators has now grown into a preferred applicator of all manufacturers. Unlike other approved applicators, RNSLLP provides design advice along with application services to add value to its client. As the technology in passive fire protection advances, RNSLLP has taken the initiative and moved astride with developments, resulting in a division abreast with the latest and best solutions to cater to client's needs

Our project management team is fully aware of application requirements for Sealants, Mortar & collar/Wrapstrip of Firestopping products manufactured by Hilti Global & Vijay Systems India.
